

Wild Weather: The Crazy Scientist Strikes Back!

An interactive live performance about weather, environmental change & planet Earth

May the forecast be with you!

Richard Scholes is back with some of the most exciting experiments from *Crazy Science & H2Whoa!* plus new earth-shattering, lightning striking experiments that will change the way students see and feel the weather.

Students will be let loose in a science lab where discovering the mysteries of planet earth and the weather are a top priority.

The crazy scientist has devised some of the world's wackiest experiments to explore the inner workings of the sun, cyclones, rain and clouds. But he needs some clever assistants to help him uncover the answers...

Students will be drawn into the world of crazy science as they become part of the experiments and assist Richard as he brings the power of the weather into the classroom.

Wild Weather: The Crazy Scientist Strikes Back is a visual, messy, larger than life look at the way our wild world works.

Cost: NZ\$5.00 (no GST) **Minimum:** 140 students **Suitability:** Prep – 9 **Duration:** 50 minutes +Q&A
• Indoor Venue Preferred • 6m wide x 4m deep performance space • Use of power outlet

Feedback for Richard Scholes' Wild Weather

Richard was brilliant! Engaging, exciting, interactive—he captivated the students from all ages with the purpose of cultivating their interest in science. Great job ✓

- **Natasha Omodei, Manjimup Primary School, WA**

Lots of great feedback! Funny, exciting, amazing—good mix of cool tricks and instructed science, with audience participation!

- **Freshwater State School, QLD**

We had 'Wild Weather' for Family Night. Parents and kids loved the show!! They are already trying some of his experiments. The show was so great. Richard had everyone captured for the entire time.

- **Robyn Day, Parkwood PS, WA**

Students loved this educational and interactive show, lots of laughter and learning. They were talking about how great the show was and what good value for money. Great learning and coverage explanations and showing students the science links... very entertaining!!!

- **Jo Griffin, Salford School, NZ**

Very positive response from both students and teachers. Even our non-science staff loved it! Very taken with the format, humour and pace. Students were most enthusiastic about doing some of the demonstrations themselves.

- **Susan Beilby, Quintilian School, WA**

Outstanding performance.

This was the most amazing show I've seen in the past 10 years of teaching!

Your performance went above and beyond in ensuring content was strongly linked to the science curriculum: the water cycle, the state of water (solid, liquid & gas) as well as adaptations are all areas covered in our Year 2 national curriculum.

Please come back next year!!!

- **St Anthony's Catholic College (Primary), QLD**

The children absolutely loved Richard's show. Very excited about science! He engaged everyone—he made them laugh but also consolidated what they had learned. Every student I spoke to just wanted to do all the experiments themselves! Richard is excellent value. He is entertaining but does manage to get the science concepts across. He gets the level just right to fully engage across an age spectrum and a knowledge spectrum.

- **Connie Morris (Years 4-8), St Joseph's PS Otahuhu, NZ**

Feedback for Richard Scholes' Wild Weather

Hugely enthusiastic response to all the experiments! Students were able to retain simple scientific concepts. New learning was well supported by dialogue and humour, which complemented the visual content. Very effective delivery! Thank you Richard for a very enjoyable session.

- **Marian Wards (Assistant Principal, Years 1-3), St Joseph's PS Otahuhu, NZ**

The performance once again was engaging and educational. Enjoyment had by all. Outstanding!

- **St Brigid's School, Collie, WA**

Students were very engaged by the magic tricks and also paid attention to the science: "We learnt a lot about Science, but it was fun learning." The resources provided were very useful to pre-teach or follow up the presentation, which ties it back to the classroom.

- **St Anthony's Catholic College (Year 8), QLD**

Brilliant production! Really good—funny and cool. Extraordinary!

- **Year 4 students from St Anthony's Catholic College, QLD**
